

The Grand Unification, Adjudicated Across All Works

The two external top-down syntheses read together and ruled claim by claim against the machines — every verdict SURVIVES, RETYPED, or honestly OPEN. The “missing work (f)” is not missing: its core is already certified mathematics. And the two walls are joined by the trade-off law: the mirrored pair kills the corner and pays the payment, the equality locus λ^* the meeting point — closed on every front, the core included.
