

The Three Closures, the Escape Retracted, and the Walls Certified Symmetric

The continuum Fisher–Rao/Leray upgrade, the off-class nc-AAK package, and the rank-aware synthesis are consolidated — and the escape quantified: the shadow re-located, the refutation decomposed to a certified $8.2\text{e-}9$ residual. The corrigendum record completes the arc: the boundary valley adjudicated, the escape retracted, the shadow-equality restored in the closure sense; the two walls certified symmetric — the corner identities on the abelian face, the word-power sandwiches on the free face, both at zero stalls — and the critical locus closed tight at $\sqrt{\lambda^*}$ (the ~~Amin Abae~~ certified at precision 120, the off-family floor $+1.1\text{e-}11$).
